Excerpt: .it is perhaps a little easier to get valuable new varieties of crinums by crossing and selection than with most other bulbous plants, especially the lilies--although there are notable exceptions among the California lilies, some of which cross very readily. Crinum seeds are very curious, in that they vary enormously in size, almost always, even in the same capsule. The pale-greenish bulblike seeds with irregular corrugations may vary from the size of a pea to that of an English walnut. When placed in a graded sequence they present a curious contrast. Yet the plants grown from the smallest seeds are likely to be quite as large and of the same appearance and quality as those grown from the mammoth ones. The seeds of the crinum thus furnish a unique link between seeds, buds, and bulbs, suggesting the properties of all these combined. Another peculiarity of the seeds is that they contain so much nutriment and moisture that they may sprout and grow, making plants of considerable size, without access to any moisture except that contained within the seed itself. I have known them to sprout when laid on a shelf, or in envelopes, away from the light and entirely dry; also when sent to me by mail from Australia they sometimes started as seeds and arrived here in envelopes as small growing plants. The crinums have been under cultivation for a long time, but there are many species that have not been experimented with, and...
